

Mac B2B and pro creator

Search architecture for technical buyers, teams, and enterprise demand

PORTFOLIO EXERCISE - NOT CLIENT WORK

QUESTION

How should professional and business intent be separated from general consumer hardware traffic?

DECISION

Keep URL and copy control, combine exact and phrase intent, and use B2B-specific exclusions and assets.

EVIDENCE RETAINED

Automation controls, keyword plan, technical RSA, negative taxonomy, and paused build state.

VALIDATION

Check lead quality, search-term drift, landing-page relevance, and conversion definitions before expansion.

AI Max & Asset Optimization Controls

Turning off Google's automated AI Max layer to keep landing pages and ad copy under direct control.

BEHIND THE STRATEGY

I left the master AI Max switch off, which keeps both Final URL Expansion and Text Customization disabled. Final URL Expansion could route a buyer looking to place a bulk order for Mac Studios to a random consumer blog or support page instead of the actual purchase path, and Text Customization risks generating generic retail-style copy that undercuts the precise, spec-driven language this audience expects, things like exact chip names, unified memory figures, and volume pricing terms that need to stay accurate.

SECTION 5

Enterprise Sitelink Configuration

Building out sitelinks that act as pre-qualifying filters on the SERP, steering business buyers in and retail shoppers elsewhere.

BEHIND THE STRATEGY

Each sitelink points at a distinctly B2B action: requesting a bulk quote, setting up Apple Business Manager, configuring a Mac Studio, or submitting a tax-exemption certificate. None of them read like a retail promotion, which is deliberate, since a consumer clicking through expecting a single laptop deal is the wrong kind of traffic here. Keeping the descriptions short and specific, volume discounts, zero-touch deployment, custom workstation builds, does more to filter the audience than any exclusion setting could. The completed set of four is shown later in the Descriptions, Sitelinks & Callout Assets screenshot.

SECTION 6

B2B Keyword Architecture

Setting up the keyword list to capture developer and enterprise purchase intent without any broad match.

Keywords and ads

Ad groups help you organize your ads around a common theme. For the best results, focus your ads and keywords on one product or service.

Add details to match your ads to the right searches

Keywords

Get keyword suggestions (optional)

Google Ads can find keywords for you by scanning a web page or seeing what's working for similar products or services

 Final URL

 Enter products or services to advertise

Enter keywords

Keywords are words or phrases that are used to match your ads with the terms people are searching for 

[m5 macbook pro]
"macbook pro for developers"
[best developer laptop]
"mac studio video editing"
[mac studio m5]
"apple enterprise hardware"
[bulk macbook pro purchase]
"apple business manager setup"

 **Upgrade your keywords to broad match:** Expand the reach of your campaign and get more conversions at a similar or better ROI  +0.1% [Apply all](#)

 **Add more keywords:** Show your ads more often to people searching for what your business offers  +4.3% [View](#) [Apply all](#)

Ad group settings for AI Max BETA

 Turn on AI Max in your campaign to use these ad group level settings

Fig. 2: Keyword input screen showing the exact and phrase match list built around developer and enterprise purchase intent.

BEHIND THE STRATEGY

The screenshot displays the Google Ads Ad build interface. At the top, there's a navigation bar with 'Ads' and a 'Try including more keywords in your headlines' prompt. Below this, the 'Ad strength' section shows an 'Average' rating. A list of optimization tips is visible, including 'Add headlines', 'Include popular keywords', 'Make headlines unique', 'Make descriptions unique', and 'Add more sitelinks', each with a 'View ideas' link.

The main content area is divided into two columns. The left column contains several sections:

- Final URL:** Set to 'https://www.apple.com'.
- Display path:** Set to 'www.apple.com / Mac-Business / M5-Pro'.
- Headlines:** A list of ten B2B-focused headlines, each with a character count (e.g., 'Official Apple® for Business' at 28/30, 'New M5 MacBook Pro' at 18/30, 'Apple Mac Studio M5' at 19/30, 'Built for Demanding Workfl' at 29/30, 'Supercharged by Apple M5' at 24/30, 'Designed for Developers' at 23/30, 'Pro Video & 3D Workstation' at 27/30, 'Configure Your Custom Ma' at 25/30, 'Apple Business Manager R' at 28/30, and 'Free Delivery & Bulk Pricing' at 28/30). There are also three empty headline slots at the bottom.

The right column features a 'Preview' section with a 'Share' and 'Preview ads' button. It shows a mobile device mockup displaying a Google search results page. Below the mockup, a disclaimer states: 'Previews shown here are examples and don't include all possible formats. You're responsible for the content of your ads. Please make sure that your provided assets don't violate any Google policies or applicable laws, either individually, or in combination.'

Fig. 4: Ad build screen showing the ten B2B-focused headlines and live SERP preview.

BEHIND THE STRATEGY

I built the negative list across five categories: bargain terms like “cheap,” “discount,” and “clearance” to filter out budget-conscious retail shoppers; free and informational terms like “free,” “tutorial,” and “how to” to stop users looking for guides rather than a purchase; job and career terms like “jobs,” “hiring,” and “resume,” since a job hunter searching “developer jobs” would otherwise trigger the “macbook pro for developers” phrase match keyword; academic and student discount terms like “student discount,” “back to school,” and “college,” since students researching education pricing would otherwise eat into a budget meant for corporate procurement; and consumer support terms like “repair,” “warranty,” and “store hours” to block anyone looking for a local retail visit rather than a bulk order. Every one of these sits on Broad Match rather than the exact or phrase match used everywhere else in this account, since broad match works in the opposite direction on the negative side: a broad negative like “used” blocks any query containing that word, so it casts a wider net of protection instead of a narrower one. The one thing I deliberately left untouched was anything containing “business” or “enterprise.” It's tempting to let an automated suggestion block a phrase like “Apple Business Manager” if it isn't sitting on the core keyword list, but those terms are exactly the Ideal Customer Profile this campaign is built for, so they stay open no matter what Google recommends.

SECTION 11

Campaign Launch Verification

Finalizing the build on the live dashboard.

Fig. 7: Campaign Overview dashboard confirming the build is published and currently paused.

BEHIND THE STRATEGY

The campaign is kept in Paused status since this is a portfolio build rather than a live account, so there's no reason for it to spend real budget while it sits here for review.

SECTION 12
