SUBJECT Auction Insights Alert: Samsung Flagship Promo Displacement

DATE Current Cycle

01 Executive Briefing & Situation Analysis

SITUATION SUMMARY

Over the last 14 days, Search Impression Share (IS) on the flagship search campaign dropped from **78% to 63%** (a 15-point loss). Auction Insights confirm competitor promo escalation (Samsung Galaxy Book / S-Series promotions), increasing overlap rate by 22% and outranking top positions.

LOST IS (RANK)

Increased by **11%**, driven by competitor Quality Score / bid leverage.

LOST IS (BUDGET)

Remained stable at **4%**, confirming Ad Rank and bid strategy as the primary friction points, not daily budget caps.

02 Auction Metric Benchmark Matrix data table · case-study values

DISPLAY URL DOMAIN	IMPRESSION SHARE	OVERLAP RATE	TOP OF PAGE RATE	OUTRANKING SHARE
apple.com (Our Account)	63.2%	—	82.4%	—
samsung.com (Competitor)	24.8%	48.6%	74.1%	18.2%
bestbuy.com (Retailer)	18.5%	36.2%	58.9%	12.4%
amazon.com (Marketplace)	14.1%	28.5%	46.3%	8.1%

LIVE
PROOF

FIG. 3.3 — Staging of the Auction Insights diagnostic panel (Insights and reports → Auction insights), establishing baseline monitoring columns for impression share, overlap rate, and outranking metrics.

TECHNICAL AUDIT NOTE

This sandbox campaign's Search impression share sits below Google's **10% reporting threshold** for populating live competitor rows, so the panel above correctly renders its diagnostic column structure with no rows returned.

The benchmark matrix in Section 2 models the competitor row data this exact panel would surface once impression share clears that threshold on a live account, for governance and counter-strategy planning purposes.

04

3-Step Counter-Strategy Action Plan

remediation protocol · impression share recovery

1

RSA Asset Adaptation

Deploy Structured Snippet and Callout Extensions emphasizing **"Instant \$250 Trade-In Credit for Non-Apple Laptops"** to neutralize promo displacement directly on the SERP.

2

Bidding Strategy Shift

Adjust target bidding from tCPA to **Target Impression Share (75% Absolute Top of Page)** on core exact-match switcher terms to directly counter rank-driven IS loss.

3

Audience Interception in PMax

Layer Custom Intent audience signals ("Samsung trade-in deal", "Galaxy Book promo") into PMax asset groups to intercept high-intent shoppers before conversion.
